

Building Australian Robotics Leadership

Australia is positioning itself as a major player in the next wave of robotics innovations by solidifying our nation's existing pockets of excellence into a growing sovereign capability. Robotics and automation technologies provide the opportunity to bring manufacturing back to Australia and harness these technologies to create step-change productivity in our key GDP industries. This will provide a significant benefit to the economy and help to create and secure more jobs, strengthening Australia as a business centre. It also has a strategic benefit, reducing the reliance on imports – an issue of increasing importance brought to light in the current COVID environment and given current rising geo-political tensions.

Two organisations leading Australia in this area are the Robotics Australia Group and the Advanced Robotics for Manufacturing (ARM) Hub. Working collaboratively, they seek to raise the global profile of Australia as a leader in the use of robotics broadly across Australia's industry verticals, and to accelerate industry's uptake of robotics and robotics-related technologies. Both are not-for-profit organisations. The Robotics Australia Group creates appetite to adopt robotics technologies while the ARM Hub catalyses appetite into adoption.

Robotics Australia Group is an advocacy group for the robotics industry – representing organisations and stakeholders across Australia that produce robotics and robotics-related technologies. It is Australia's peak body for robotics and seeks to advocate for robotics becoming a new industry for Australia. It is funded by its members across Australia.

ARM Hub works across industry sectors in a partnership and project-oriented role to accelerate the up-take of advanced robotics to drive advanced manufacturing in Australia. It is funded by industry, research institutions and government partners. It has a Corporate Membership program that engages members around the company's services.
